

THE RAMON MARGALEF
SUMMER COLLOQUIA
A view of the ocean from Barcelona

2015 Edition:

"Patterns and processes in boundary marine ecosystems"

6th July to 10th July 2015, Barcelona (Spain)

Location

Barcelona is one of the most attractive cities in Europe. Its wonderful weather and privileged location by the sea, the numerous architecture styles (modernist, gothic, medieval, romanesque, roman) and its beautiful surroundings, a very active civil society, the many international events and exhibitions, and the never-ending cultural proposals, attract visitors from all over the world.

The Summer Colloquium will be held at the **Institute of Marine Sciences (ICM)**, the largest Spanish centre for the study of Marine Sciences. ICM has a permanent staff of more than 60 researchers, with well-recognized scientists on the fields of Biological, Chemical and Physical Oceanography. It is located near downtown Barcelona, right by the beach and besides its city harbour. It has excellent field, laboratory and classroom facilities to hold the Ramon Margalef Summer Colloquia. Additionally, there are several nearby student residences which are available for the summer university-vacation period, where the participants of the colloquium will be able to lodge.
